| <b>B.Sc.</b> DEGREE EXAMINATION – <b>MATHEMATICS</b>   |                                       |  |
| SECOND SEMESTER – APRIL 2023   |                                       |  |
| MT 2501 – ALGEBRA, ANAL.GEO. & CALCULUS - II   |                                       |  |
| ,  |                                       |  |
| Date: 10-05-2023 Dept. No.   | Max. : 100 Marks                      |  |
| Time: 09:00 - 12:00 NOON   |                                       |  |
|  |                                       |  |
| SECTION A  | (10x2 - 20)                           |  |
| Answer ALL the questions:  | (10x2=20)                             |  |
| 1. Evaluate $\int \log x  dx$ .  |                                       |  |
| 2. Evaluate $\int \frac{dx}{x^2+2x+5}$ .   |                                       |  |
| 3. Solve $\sqrt{1+y^2} + \sqrt{1+x^2} \frac{dy}{dx} = 0.$  |                                       |  |
| 4. Solve $(D^2 - 5D + 6)y = 0$ .   |                                       |  |
| 5. Define convergent sequence with an example.   |                                       |  |
| 6. State Cauchy's root test.   |                                       |  |
| 7. Write down the expansion of $(3x + 5y)^5$ .   |                                       |  |
| 8. Expand $\log (1 + x)$ .<br>9. Find the distance of the origin from the plane $6x = 2x + 2z = 14 - 0$  |                                       |  |
| 9. Find the distance of the origin from the plane $6x - 3y + 2z - 14 = 0$ .<br>10. Find the equation of the sphere with radius 4 and centre $(1, 2, 3)$ .  |                                       |  |
| 10. Find the equation of the sphere with radius 4 and centre $(1, 2, 3)$ .   |                                       |  |
| SECTION B  |                                       |  |
| Answer any FIVE questions:   | (5x8 = 40)                            |  |
| 11. Prove that $\int_0^{\pi/4} \log(1 + \tan \theta)  d\theta = \frac{\pi}{8} \log 2.$   |                                       |  |
| 12. Evaluate $\frac{x+\sin x}{1+\cos x} dx$ .  |                                       |  |
| 13. Solve $\frac{dy}{dx} - y \tan x = \frac{\sin x \cos^2 x}{y^2}$ .   |                                       |  |
| 14. Solve $(D^2 + 4)y = x \sin x$ .  |                                       |  |
|  |                                       |  |
| 15. Test the convergence of the series $\sum_{n=0}^{\infty} \frac{n^3+1}{2^n+1}$ .   |                                       |  |
| 16. Sum the series $1 + \frac{1+3}{2!} + \frac{1+3+3^2}{3!} + \frac{1+3+3^2+3^3}{4!} + \cdots$   |                                       |  |
| 17. Find the equation of the plane passing through the points (3, 1, 2), (3, 4, 4) and perpendicular to the  |                                       |  |
| plane $5x + y + 4z = 0$ .  |                                       |  |
| 18. Find the equation of the sphere which passes through the circle  |                                       |  |
| $x^{2} + y^{2} + z^{2} - 2x - 4y = 0, x + 2y + 3z = 8$ and touches the plane $4x + 3y = 25$ .  |                                       |  |
| SECTION C  |                                       |  |
| Answer any TWO questions:  | (2x20 = 40)                           |  |
| 19. (a) Find the reduction formula for $I_n = \int \sin^n x  dx$ , where $n \in N$ and he  | ence find $\int^{\pi/2} \sin^n x  dx$ |  |
| (b) Evaluate $I = \int_0^{\pi/2} \log \sin x  dx$ .  |                                       |  |
| ů – Ever Standard – Ever Standard<br>– Ever Standard – Ever Stan |                                       |  |
|  | (10+10)                               |  |
|  |                                       |  |

| 20. (a) Solve $(D^2 + 2D + 5)y = x e^x$ .    |        |
|--|--------|
| (b) Solve $\frac{d^2y}{dx^2} + y = \sec x$ . | (8+12) |
| 1  |        |

- 21. (a) Examine the convergence of  $\sum_{n=1}^{\infty} \left(\frac{n}{n+1}\right)^{\frac{1}{2}} x^n$ . (b) Find the sum to the series  $\frac{5}{1!} + \frac{7}{3!} + \frac{9}{5!} + \cdots$  (10+10)
- 22. (a) Prove that the lines  $\frac{x+1}{-3} = \frac{y+10}{8} = \frac{z-1}{2}$ ;  $\frac{x+3}{-4} = \frac{y+1}{7} = \frac{z-4}{1}$  are coplanar and find also their point of intersection and plane through them.

(b) Find the equation of the sphere through the four points (2, 3, 1), (5, -1, 2), (4, 3, 1) and (2, 5, 3). (10+10)
